

Service and Maintenance for Your Safety -
From the Market Leader

The safety of your employees is paramount - our service engineers will make sure of that

We will assist you in complying with statutory regulations

The safety of your employees is top priority in your laboratory. EN 14175 stipulates the annual inspection of safety-relevant furniture and equipment in laboratories, like fume cupboards and safety cabinets.

Our service engineers will guarantee the most stringent safety standards for your employees worldwide.

You're on the safe side with us

Our service engineers have received the very best training and have thorough and extensive interdisciplinary product knowledge in ventilation technology, filtration, electrical engineering, electronics, mechanics and plumbing. We understand every component of your laboratory furniture down to the very last detail.

All of our measuring and test equipment complies with the current state of the art.

Waldner does not experience service bottlenecks. Over 80 in-house Waldner technicians, qualified electricians, electronic engineers, installers and carpenters are on hand, if need be, to support our service technicians in their high purity gas tests or special repairs, rebuilding or redesign of your laboratory furniture.

We have many years of service experience

Our employees' extensive specialist knowledge does not come about by chance. As the number one laboratory manufacturer, we set up our own in-house service department many years ago.

Our specialists' extensive experience and expert technical knowledge and expertise are also the result of continuous further training and education.

Expert and specialist care from Waldner

In addition to their specialist technical training and experience, our service technicians have exacting knowledge in the field of fume cupboard testing and naturally work with specialist tools and the latest calibration and maintenance software.

We test and measure all safety-relevant equipment in your laboratory, for instance all models of fume cupboards, monitoring and control components and safety cabinets.

Service and Maintenance

We guarantee the most stringent safety standards in your laboratory

Safety assured!
Service & maintenance certified to EN 14175

Don't maintain it yourself - allow Waldner to do it

Your inspection and maintenance contract, tailored to your specific needs, precisely defines the scope of our services and provides an exact price for your budget.

You don't have to worry about a thing

With your specific service contract, we will take responsibility for the annual scheduling of your maintenance and agree the date for our work with the responsible departments. We therefore take from you the onerous duty of planning these dates.

Extended warranty

A key benefit when buying new laboratory furniture: your warranty period to comply with the German Construction Contract Procedures (VOB) for laboratory components requiring maintenance is extended from 2 to 4 years on the conclusion of a service contract or the commissioning of annual maintenance.

Our service fleet is equipped with genuine spare parts

Should you require a safety-relevant spare part during servicing - we will have it with us. Without time-consuming interruptions, you will therefore save valuable time and, at the same time, look after your budget.

Local fleet

Our comprehensively equipped vehicles are located Europe-wide and can be quickly on site if the worst comes to the worst.

Service and Maintenance

Service and maintenance from the market leader

Everything from one source: And of course we also maintain other manufacturers' equipment

One contact for all maintenance and service issues

As the leading manufacturer of laboratory furniture, we can also offer excellent efficiency with the service and maintenance of other manufacturers' equipment.

The availability of spare parts and many years of experience make our service fast and economical.

With regular service and maintenance, we will guarantee that your laboratory components are in the best working order, thereby ensuring safe and problem-free work in your laboratory.

Do not expose yourselves and your organisation

Your insurance cover may be void if you do not perform the annual service and maintenance of safety related equipment according to relevant regulation. A mere face velocity test is not sufficient to certify your fume cupboards are working correctly and safely.

In writing

Our service technicians will provide you with a detailed test and measuring report on completion of the service work to offer you legal security with regard to the Employers' Liability Insurance Association and the Industrial Inspectorate.

The following safety-related equipment must be maintained annually:

Fume cupboards:
Extract fume cupboards
Secuflow fume cupboards
Air supply fume cupboards
Filter fume cupboards
Radio-isotope fume cupboards
Special application fume cupboard with fume scrubbers and neutra-mats
Mobile fume cupboards

Monitoring and control components:
Function displays for fume cupboards
Airflow controllers for fume cupboards
Input air controllers
Room extract air controllers
Group controllers
Sash controllers

Safety cabinets:
Solvent cabinets
Acid and alkali cabinets
Cabinets for chemicals
Gas cylinder cabinets

§ EN 14175

Service and Maintenance

For efficient laboratory operations without down times

Smooth service Get in touch with us!

Complete Waldner servicing will save you time and money

Save yourself the time of coordinating different service providers and unnecessary external disruption to laboratory operations on different dates.
